

SKYCODED™

COLOR CODED AND NUMBERED WIRING

At the heart of every Skyjack machine is our proven and simplistic control system. Skyjack's color coded and numbered wiring system makes our machines the easiest to troubleshoot and repair, this translates into less maintenance and lower costs for our customers.

The control system on the new Full Size Rough Terrain Scissors may look different, but provides the same simplistic reliability. The wiring system is still color coded and numbered and that simplicity has been reinforced with a single control module that manages all machine functions (except for emergency lowering). A visual display module at the base control box provides an easy to navigate interface – outputting plain text and easily understood codes.

OPTIONAL FEATURES

ACCESSORYZERS™

Skyjack's approved accessories are designed to add functionality to your machine and convenience for the operator.

ELEVATE

MORE THAN TELEMATICS

Skyjack recognizes that innovation doesn't always mean more complexity and more associated costs. The continued development of Skyjack's SKYCODED™ control system further supports its ELEVATE telematics solution, which subsequently benefits Skyjack's customers and equipment users - keeping cost of ownership down and machine runtime up.

SCISSORS**

SKYJACK™
simply reliable

BIGGER. BETTER. SKYJACK.

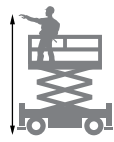

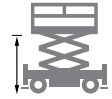

ALL NEW Range of Class-Leading Full Size Rough Terrain Scissors.

The decision to move to increased platform heights was to compliment the growing trend towards urban intensification with taller buildings, higher siding, and more work at increased heights. This new Full Size Rough Terrain range makes work at six stories, with 11.5 ft floor-to-floor possible. Platform heights have increased to 33', 43' and 53' respectively, while a BRAND NEW 63' model is being added to the range. Platform capacities have also increased across the series ranging from 1,200 lbs up to 2,750 lbs.

While the models themselves are new, the design philosophy behind them remains unchanged. Skyjack has continued its focus on serving the needs of the rental industry by delivering a range of machines that maintain the Skyjack ideology of providing industry-leading lifecycle value.

The new range still boasts features that are associated with Skyjack, including an axle-based four-wheel drive, commonality of parts throughout the range, and attention to accessibility for service. It's these core competencies that keep the cost of ownership down and the new range positioned as an industry leader in all-terrain performance. Owners and operators alike will appreciate the improvements Skyjack has made on these new machines.

These attributes combined with a full range of ACCESSORYZERS™ make bringing materials to height less strenuous, while significantly improving utilization for our customers.

Preliminary specifications at time of printing. Consult your local area sales representative for details.

EXPANSIVE WORKSPACE

The large decks seen on Skyjack's Full Size Rough Terrain range remain the largest work platforms in the market, which is complimented by class-leading capacities. At just over 6' wide and 14.5' long, with the option of single or dual 5' extension decks, the all steel platform provides a large working space for personnel, tools, and material.

Similar to Skyjack's previous line of Full Size Rough Terrain Scissors, the new range improves upon an already class leading clearance between the platform and the base of the machine. Keeping that gap at only 8.5" makes working along the side of the platform all the more accessible.

AXLDRIVE™ SUPERIOR TRACTION

Skyjack's AXLDRIVE™ is a highly efficient, true mechanical four-wheel drive system which, when combined with a selective differential lock, provides unmatched traction and up to 40% gradeability. Compared to other manufacturer's machines, there is a significant reduction in the number of hydraulic connections, which results in lower maintenance needs and more uptime. This industry-leading terrain capability means one can use Skyjack Full Size Rough Terrain Scissors in the most challenging of conditions.

SMARTORQUE™

Skyjack's new Full Size Rough Terrain Scissors feature an optimized balance of engine horse power, torque, and hydraulic performance. By adjusting axle gear ratios and maximizing hydraulic output, the new models are able to provide excellent performance with less engine horsepower. An optimized lower horsepower engine not only benefits performance but keeps cost down - both upfront acquisition and maintenance. Less emission controlling components avoids the cost associated with their complexity, as well as the time and inconvenience required in maintaining them. SMARTORQUE™ means no Diesel Particulate Filter (DPF), no Diesel Exhaust Fluid (DEF)/AdBlue, and no other active exhaust after treatment. The new Full Size Rough Terrain Scissors are Tier 4 Final compliant.

NEW CONTROL BOX

Newly designed scissor lift control box. All drive, lift, outrigger, and option functions will be controlled from a single box in the platform. Composed of a modified nylon composite material, the box has been rigorously tested for impact, abrasion, UV, and temperature resistance.

NEW & IMPROVED SCISSORS

Extra wide, twin lift cylinder design scissor levels with Skyjack's unique clevis style scissor ends distribute loads symmetrically over the pins, increases strength, enhances rigidity and improves operator comfort.

EASE OF MAINTENANCE

Hydraulic and engine components are all easily accessible. All routine maintenance items are located on the outboard side of engine and can be accessed without removing the engine cover. Hydraulic manifolds for lifting, driving, and braking are all located under a protective cover at the rear of the machine(s).

INCREASED LEVELING CAPABILITY

Auto-leveling outriggers allow for use on rough and uneven conditions. Increased cylinder rod length provides greater clearance and leveling capability - up to 10°(front to back) or 6° (side to side). Individual outriggers can still be controlled from the base control box for any service or maintenance needs.

SIMPLE EMERGENCY LOWERING

Single location emergency lowering similar to Skyjack booms - toggle switch for enable and toggle switch for emergency lowering function.

MAINTENANCE-FREE SOLID TIRES

Solid rubber tires (non-marking option also available) are standard on all of the new Full Size Rough Terrain models. They provide a damage resistant alternative for enhanced protection of terrain and debris found on a typical job site. A deep rough terrain tread provides optimal traction while also extending the serviceable life of the tires.
