

HVO

Skyjack now approves Hydrotreated Vegetable Oil (HVO) as a diesel alternative for the majority of its Rough Terrain Scissors, Telescopic and Articulated Booms. HVO is a fossil-free paraffinic fuel synthesized from sustainable and renewable resources, produced to its own standard (EN15940) and fulfils the requirements of ASTM-D975.

Helping Rental to go Carbon Neutral

HVO has been shown to **reduce greenhouse gas emissions**, compared to standard diesel and can help with **carbon footprint reduction** strategies.

When using HVO shorter maintenance intervals may be required, including replacing fuel filters and system cleaning. Since the density of EN15940 is less than EN590 diesel, when using HVO a reduction in performance may be experienced.

More details are available through Skyjack Product support – ask for document SR-160
